

The Hepatocellular Carcinoma Interest Group

Facts & Enrollment Information

About the Hepatocellular Carcinoma (HCC) Interest Group

Hepatocellular carcinoma (HCC) is a leading cause of cancer death worldwide; its incidence is increasing in the United States. Depending on disease extent and underlying liver status, patients may be treated with local, locoregional, and/or systemic therapy. The HCC IG was established to catalyze progress on the use of radiotherapy (RT) in the management of HCC.

Goals

1. To suggest how RT should be implemented in the management of HCC and identify future directions for the study of RT in HCC.
2. To share experiences using RT for HCC, including the use of radiosensitizers and stereotactic RT.
3. To discuss methods for performing preclinical studies of RT for HCC and biomarkers of response.

HCC IG Chairpersons

- Chandan Guha, MBBS, PhD (Albert Einstein, CGUHA@montefiore.org)

Teleconference Schedule

- The HCC meets virtually via the WebEx platform quarterly and at the NRG Oncology meeting biannually.
- The group membership is approximately 50.

Activities and Accomplishments

Clinical Trials

1. Sorafenib Tosylate With or Without Stereotactic Body Radiation Therapy in Treating Patients With Liver Cancer (<https://clinicaltrials.gov/ct2/show/NCT01730937>) (ClinicalTrials.gov Identifier: NCT01730937).
2. TACE vs TACE+SBRT for Unresectable Hepatocellular Cancer (TACE-SBRT) (<https://clinicaltrials.gov/ct2/show/NCT02794337?term=tace+sbrt&cond=Liver+Cancer&draw=2&rank=1>) (ClinicalTrials.gov Identifier: NCT02794337) (IAEA trial).

Ahmed, Recent Developments and Therapeutic Strategies against Hepatocellular Carcinoma, *Cancer Res*, 79 (2019) 4326-4330.

Workshop

5. NCI Interest Group Workshop on Hepatocellular Cancer: New Indications and Directions. An NCI-AACR-AASLD initiative. Bethesda, MD, November 2018.

Interested in becoming a member of the HCC Interest Group?
